

Dear community, I hasten to present you my set of ANIMATED stickers for Telegram and Discord.

21 days spent on making stickers I hope you enjoy using them to express your emotions!

Of course, stickers also play a big role in marketing.

The site address in the name of the stickers will attract new users, which means our community will grow and develop! Enjoy.

P.S. You can find sticker pack at the link:

How to Add Discord Stickers

You can only add and manage a server's stickers on desktop—Android and iOS aren't supported.

To add stickers to a server:

Navigate to the server.

Click the server's name in the top-left.

Click Server settings.

From the left menu, click Stickers.

If your server is a high enough level, click Upload sticker. Give your sticker a name, upload the file, and choose a related emoji (this is so your sticker appears as a suggestion to match emojis when someone is searching stickers). You can also add a description to help those with screen readers.

When you're happy with how it looks, click Upload. These are the requirements for your image file:

PNG (static) or APNG (animated) file type
500KB maximum file size
320 x 320 pixels exactly
